Building success with the business telephone leader

The Aastra Telecom family of screen phones has always been designed to provide you with more. More information on the large, eight-line display screen. More flexibility with the six "softkeys" that surround the display. More options in making and receiving calls using the built in speakerphone or in many cases, using the headset jack. More enhanced directory and caller list capacity.

However, we recognize that for some situations, less is more. Introducing the Model 470, our newest entry level screen phone that provides a great combination of features in a business screen phone design.

The Model 470 offers Call Display and Visual Call Waiting to let you know who is calling even when you are already on line. The large display provides "at a glance" information without having to "toggle" to another screen for basic caller information.

The screen is also useful when reviewing entries in the 50

Name and Number Callers List and 50 Name and Number Directory. In addition, the Model 470 has a unique on screen directory function that shows up to six directory entries at a time that can be speed dialed using the "softkeys". No need to try and write names on little paper labels. And you can change the directory listings as often as you want.

When making and receiving calls, the Speakerphone and Headset features provide advanced flexibility and options to meet your needs. On screen options allow for seamless transfer of a call from the handset to the speakerphone or an external headset. And, a five number redial function provides efficient redialing of a previously called number.

Compatible with most business telephone systems, and offering a variety of additional features, Model 470 may very well be the solution you are looking for.

The Model 470 by Aastra Telecom – a "valuable" business tool.
